PITCH

A narrative-driven psychological horror game, brought to life by professional voice actors, where you reconstruct a forgotten massacre through eerie echoes and environmental storytelling.

DESCRIPTION

Echoes is a first-person psychological horror experience set in a parallel dimension where those who travel a cursed road are drawn in, all carrying sins from their past.

You play as Alex, who awakens in this world with no memory of who he is. As he explores, he discovers that this dimension is inhabited by “echoes”: remnants of past lives, victims and sinners trapped in an endless cycle, reliving their stories.

Through exploration and careful observation, players will piece together dark events from the past. Each location, each story, and each echo is a piece of a larger puzzle that must be understood to progress.

Along the journey, Alex is guided by Arabella, a mysterious presence bound to a medallion he discovers early on. Their relationship evolves through dialogue and player choices, directly shaping the narrative.

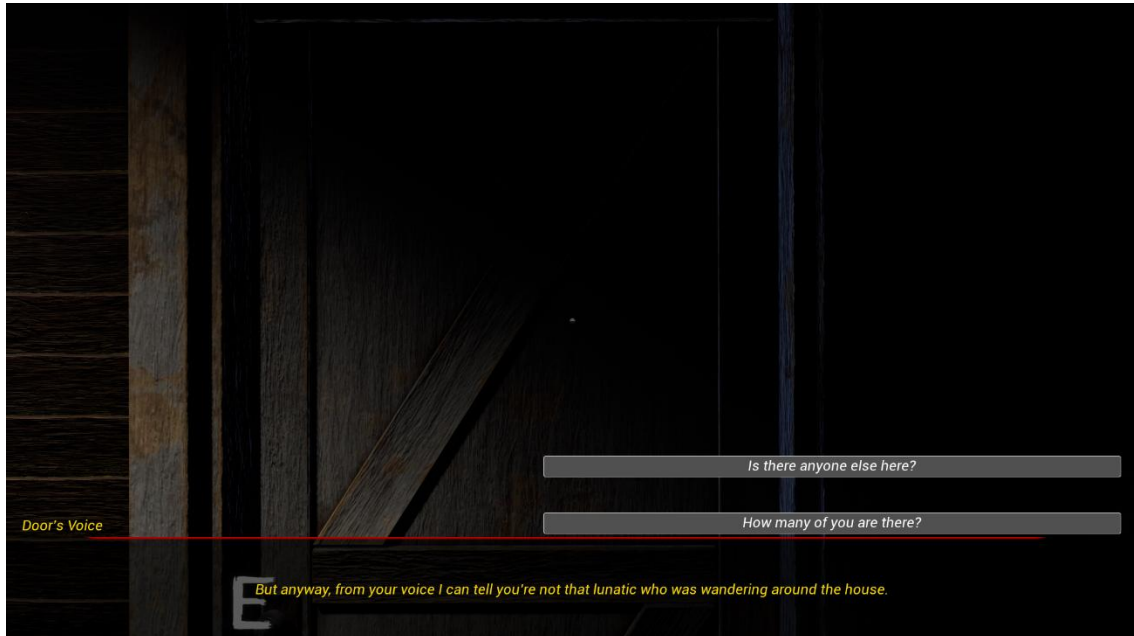

Every decision, discovered object, and triggered event will determine Alex’s fate: reclaim his identity and escape or become another lost echo. Multiple endings reflect these diverging paths.
